

MICROFILM[®]

HOT STAMPING FOILS

PRODUCTS FOR LEATHER

FULL COVERAGE PREPARATION THERMO ADHESIVES

LT-500/1	Full coverage thermo adhesive suited to prepare leather to receive subsequent transfer finishing. Soft and elastic. Specially suitable for metallized foils (L-500 series).
LT-500BI	White version of LT-500/1.
LT-500N	Black version of LT-500/1.
LT-500/2	Full coverage thermo adhesive suited to prepare smooth leather and light fabrics to receive subsequent transfer finishing. Low thickness.
LT-500/3	Full coverage thermoadhesive suited to prepare smooth leather and light fabrics to receive subsequent transfer finishing. Medium thickness.
LT-700	High thickness thermoadhesive polyuretane coated on paper. Suitable for leather coupling.

HOT MELT ADHESIVE DESIGNS

HO	Hot melt adhesive designs. Suitable for all partial transfer foils.
H	Light hot melt adhesive designs. Suitable for all partial transfer foils. Suitable for extremely light fabrics and smooth leather.

METALLIZED FOILS

L-100	Metallized foil suitable for partial transfer over appropriate adhesive; eg H, HO, LT-500 series.
L-200	Metallized foil suitable for partial transfer over appropriate adhesive; eg H, HO, LT-500 series. Available in over 100 colours.
L-500	Full transfer metallized foil. Materials must be pre-treated with an appropriate adhesive; eg LT-500 series. Available in over 100 colours.
LHR-800	Full transfer metallized foil with high general fastness. Materials must be pre-treated with a suitable adhesive; eg LT-500/1.
CU-19	Pure copper metallized foil suitable for partial transfer over appropriate adhesive; eg H, HO, LT-500 series. The copper surface creates an adverse environment to bacterial and viral proliferation.

DESIGNS

P - PQ	Thermoplastic designs for direct transfer onto leather. The film transfers completely and requires no adhesives. A light preparation or a subsequent finishing improves the fastness.
TS - TSQ	Partial transfer designs. Suitable for partial transfer over pre-printed appropriate adhesive; eg H, HO, LT-500 series.
A - AQ	Drawings based on acid dyes. To be applied on previously wet skin with a suitable solution. The film transfers completely by dyeing the skin by affinity.

METALLIZED DESIGNS

LA - LAQ	Metallized designs for partial transfer over prior applied adhesive. All surface back the design is metallized.
DL	Monochrome metallized designs. The metallization is present only in correspondence with the drawing. The transparent parts of the film do not release anything allowing the adhesives to receive subsequent transfers.

VARNISHES

VT500	Ready-to-use thermo adhesive protective varnish. Available in transparent, black and white. Also suitable for embossing.
WAX	Pull-up/wax effect, termoplastic varnish, available in neutral and colored version. After the transfer, the stretching of the leather will show the typical wax effect, highlighting the color. Also suitable for embossing.

SURFACE PROTECTORS

12TL15 12TL18	Protective varnish for the leather's surface. Due to its partial transfer it can be also used to preserve the gloss of the hot melt adhesives designs (HO series). It adheres to thermoplastic surfaces only. It makes an extremely hard and shiny layer. Available widths 1.500 and 1.800 mm.
12NL15 12NL18	Black version of 12TL. Available widths 1.500 and 1.800 mm.
12OP15 12OP18	Matt version of 12TL. Available widths 1.500 and 1.800 mm.

PLAIN AND RELEASE TREATED MATERIALS

12PPN12 12PPN15 12PPN18 12PPN20	12 µm plain polyester film. Available in several widths: 1.200 - 1.500 - 1.800 - 2.000 mm.
19PPN18	19 µm plain polyester film, width 1.800 mm.
23PPN152 23PPN18	23 µm plain polyester film. Available widths: 1.520 and 1.800 mm.
50PPN16	50 µm plain polyester film, width 1.600 mm.
12PMO15 12PMO18	12 µm matt, plain polyester film. Available widths: 1.500 and 1.800 mm.
19PMO18	19 µm matt, plain polyester film, width 1.800 mm.
23PMO152	23 µm matt, plain polyester film, width 1.520 mm.
35PPLN16 35PPLN18	35 µm plain polypropylene film. Available widths: 1.600 e 1.800 mm.
15PPLNOP16	15 µm matt, release treated polypropylene film, width 1.600 mm.
